**Complete amino acid sequence of the B chain of mistletoe lectin I.";

**Blochem. Biophys. Res. Commun. 246:596-601(1998).

**C: -!- FUNCTION: The A chain is responsible for inhibiting protein synthesis through the catalytic inactivation of 60S ribosomal synthesis through the entry into the cell of the A chain; B chains are also responsible for cell agglutination (lectin activity).

**C: -!- FUNCTION: Disulfide-linked dimer of A and B chains.

-!- SUBUNIT: Disulfide-linked dimer of A and B chains.

-!- SUBUNITION: Due to its immunomodulative effects it is being studied in clinical trials in cancer patients as it may slow the growth of cancer cells and be an effective treatment for solid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MLB_VISAL P81830;

-!- FUNCTION: RIBOSOME-INACTIVATING PROTEIN OF TYPE 1, INHIBITS
-!- PROTEIN SYNTHESIS IN ANIMAL CELLS (BY SIMILARITY).
-!- CATALYTIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at one specific adenosine on the 28S rRNA.
-!- SIMILARITY: BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Bryonia dioica and their utility immunoconjugates.";

Biochem. J. 309:285-298(1995).

-i- FUNCTION: TRICHOSANTHIN IS AN ABORTION-INDUCING PROTEIN. IT IS
CAPABLE OF INHIBITING HIV-1 INPECTION AND REDLICATION. IT
INACTIVATES EUKARYOTIC 60S RIBOSOMAL SUBUNITS.

-i- CAPALTYIC ACTIVITY: Endobydrolysis of the N-glycosidic bond at specific adenosine on the 28S IRNA.

-i- SIMILARITY: BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY TYPE 1 RIP SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Collins E.J., Robertus J.D., Lopresti M., Stone K.L., Williams K.R.,

                                                                                                                                                                       "COmplete amino acid sequence of the A chain of mistletoe lectin I.";
FEBS Lett. 399:133-157(1996).

-i- FUNCTION: THE A CHAIN IS RESPONSIBLE FOR INHIBITING PROTEIN
SYNTHESIS THROUGH THE CATALYTIC INACTIVATION OP 60S RIBOSOMAL
SUBUNITS BY REMOVING ADENINE FROM POSITION 4,324 OF 28 S RNNA. THE
B CHAIN BINDS TO CELL RECEPTORS AND PROBABLY FACILITATES THE ENTRY
INTO THE CELL OF THE A CHAIN; B CHAINS ARE ALSO RESPONSIBLE FOR
CELL AGGLUTINATION (LECTIN ACTIVITY).

-i- CATALYTIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at one
specific adenosine on the 28S TRNA.

-i- SUBUNIT: Disulfide-linked dimer of A and B Chains.
                            TYPE 2 RIP SUBFAMILY. PIR; PD0018; PD0018.

"Complete amino acid sequence of luffin-b, a ribosome-inactivating protein from sponge gourd (Luffa cylindrica) seeds.";

Agric. Biol. Chem. 55:229-238(1991).

-I- CATALYTIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at specific adenosine on the 28S IRNA.

-I- SIMILARITY: BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           PIR; JN0108; JN0108.

"Molecular cloning of ricin";

"Molecular cloning of ricin";

Targeted Diagn. Ther. 7:81-97(1992).

-i- CATALYTIC ACTIVITY: ENDOHYDROLYSIS OF THE N-GLYCOSIDIC BOND AT ONE
SPECIFIC ADENOSINE ON THE 28S RRNA.

-i- SIMILARITY: BELONGS TO THE RIBOSOME-INACTIVATING PROTEIN FAMILY.

The clibrary was probed using the 35-mer given in AAN70514. Figure 4 (see AAN70520, AAN70521, AAN70522) shows the nucleotide sequences of three classified contg. cDNA inserts obtd. by probing a cDNA library for sequences encoding ricin B using the probe in AAN70517. The cDNA inserts can be placed into expression vectors. Site-directed mutagenesis may be used to place an ATG start codon and a HindIII coling sequences of the inserts can be ligated into expression vectors. The coding sequences of the inserts can be ligated into expression vectors contg. the PhoA promoter-operator and leader sequence (QAAN7053) and suitable retrooregulators.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches 179;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DЬ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The full length sequences encoding ricin A (AAN70520), ricin D CC (AAN70525) putative ricin E (AAN70526) and RCA (AAN70524) in precursor CC form were obtained, using the messenger RNA to obtain a cDNA library, and CC library was probed using the messenger RNA to obtain a cDNA library, and CC (Library was probed using the 35-mer given in AAN70514. Figure 4 (see CC AAN70520, AAN70521, AAN70522), shows the nucleotide sequences of three CC plasmids containing cDNA inserts obtained by probing a cDNA library CC for sequences encoding ricin B using the probe in AAN70517. The cDNA CC inserts can be placed into expression vectors. Site-directed containing the mature protein, (see AAN70518). The CC coding sequences of the inserts can be ligated into expression coden and a Hindill CC site at the beginning of the mature protein, (see AAN70518). The CC coding sequences of the inserts can be ligated into expression cC (AAN70523) and suitable retroregulators.

CC (AAN70523) and suitable retroregulators.

                                                                                                                                                                                                                                                                                                                                                                                                                             Ъ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This polypeptide comprises the castorbean cytotoxin, ricin.

CD DNA (see AAT91638) encoding the enzymatic A domain and a portion CC DNA (see AAT91638) encoding the enzymatic A domain and a portion CC DIA (see AAT91638) encoding the enzymatic A domain and a portion CC DIA (see AAT91638) encoding the enzymatic A domain and a portion CC cricin-diphtheria toxin B'-interleukin-2 gene that was expressed in CC E. coli. The hybrid protein can be isolated and used to treat CC conditions involving over-production of cells bearing IL2 receptors, such as certain T-cell lymphomas and organ transplant rejection CC crises. The hybrid inactivates ribosomes in cells bearing IL2 receptors, resulting in cessation of protein synthesis and death of CC target cells. Claimed hybrid proteins comprise a translocation CC domain and a cell binding domain from e.g. a hormone, growth factor CC or polypeptide toxin. The hybrid molecules can be used for the CC labels) into cells. The use of a translocation mechanism ensures that the hybrid will be effective in relatively low doses, since a that the hybrid will be effective in relatively low doses, since a contractive of the contractive of the target will be taken into the contractive of the target will be taken into the contractive of the taken into the contractive of the target will be taken into the contractive of the target will be taken into the contractive of the target will be taken into the contractive of the target will be taken into the contractive of the target will be taken into the contractive of the target will be taken into the contractive of the target will be taken into the contractive of the target will be taken into the contractive of the target will be taken into the contractive of the target will be taken into the contractive of the target will be taken into the contractive of the target will be taken into the contractive of the target will be taken into the contractive of the target will be target will be target will be target will be target of the target will be target

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               high proportion of the substance of interest will be taken into the targeted cells. The hybrid molecules can be manufactured as a single hybrid recombinant protein, permitting reproducibility, consistency, and the precise control of composition. Castor bean ricin toxin

15-FEB-2000 (first entry)

```
CC protein comprising three parts: (a) the first part conding a nybrid of the binding domain of a cell-binding polypeptide ligand allowing the hybrid protein to bind to an animal cell; (b) the second part comprises chybrid protein to bind to an animal cell; (b) the second part comprises comprises of a bortion of a translocation domain of a naturally occurring protein comprises. It toxin, both the covin, both linum neurotoxin, ricin, cholera covin, LT toxin, C3 toxin, shiga-like toxin, pertussis toxin and tetanus covin, which translocate the third part of the across the cytoplasmic committee into the cytosol of the cell; and (c) the third part comprises covin, which translocate the third part of the across the cytoplasmic covin, which is non-native coving protein of (b). This sequence represents the castor bean ricin toxin sequence for use in generating the hybrid of the castor bean ricin toxin sequence for use in generating the hybrid of the castor bean ricin toxin sequence for use in generating the hybrid of the castor bean ricin toxin sequence for use in generating the hybrid of the castor bean ricin toxin sequence for use in generating the hybrid of the castor bean ricin toxin sequence for use in generating the hybrid of the castor the disease. The hybrid is especially used in treating calleviate or cure the disease, by delivering to affected cells an enzyme complying the missing function, to supplementing cellular levels of a particular enzyme or a scarce precursor or cofactor, to directing toxins concert colline toxins to destroy particular cells (such as adipocytes, cancer coll, or virus infected-cells), to counteracting viral infections such as concert in the process of getting non-therapeutic substances such as detectable labels into cells.

      the third part across the cytoplasmic membrane and into the cytosol of the cell. The third part comprises a chemical entity to be introduced into the cell, where each of the first and third part is non-native with respect to naturally occurring protein, and the covalent bond attaching the second and third part is cleavable. The toxin represented by the present sequence can form part of the third portion of the hybrid protein. The cell binding domain binds to a specific cell and the translocation domain transfers the hybrid molecule across the cell membrane into the cytosol. The third part of the protein, linked to the translocation domain through a cleavable bond, can then carry out its function. The hybrid molecules are useful for treating genetic deficiency diseases by delivering to affected cells an enzyme supplying the missing function, to supplement cellular levels of a particular enzyme or a scarce precursor or cofactor, to direct toxins or other poisons to virus-infected cells), and to counteract viral infections such as HIV by introducing into annorminate cells antibodies to virus-infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       07-JUN-1984;

                                                                                                                                                                                                                                                                                                                             This sequence represents the Ricinus communis ricin protein sequence. The toxin can be included in the hybrid protein of the invention and used to destroy or modify the cell that the hybrid protein is targeted to. The hybrid protein comprises a first part which is a portion of the binding domain of a cell-binding ligand, effective to cause the hybrid molecule to bind to a cell of an animal. The second part comprises a portion of a translocation domain of anaturally occurring protein (e.g. the translocation domain of diphtheria toxin) the second part translocates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New two-part hybrid protein comprising a translocation domain and cell-binding domain, for treating genetic deficiency diseases, can and HIV infections - \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ricin; toxin; hybrid protein; translocation domain; cell destruction; cell binding domain; genetic deficiency disease; cell targetting; cancer;
